Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present invention relates to Bordetella bronchiseptica pertactin (outer membrane protein) or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antigens in biological preparations or in purifying corresponding proteins, glycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antigens to identify antibodies to Bordetella in materials such as human or other animal tissue and human or other animal cells, as well as biological fluids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the antigens can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. bronchiseptica pertactin outer membrane protein region I.

(outer membrane protein) or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antiqens in biological preparations or in purifying corresponding proteins, glycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antiqens to identify antibodies to Bordetella in materials such as human or other animal cells, as well as biological fluids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the antigens can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. bronchiseptica Polypeptides containing polymorphisms of the repeated regions of pertactin in Bordetella species, useful in immunogenic compositions for treating infections caused by Bordetella and in diagnostic methods invention relates to Bordetella bronchiseptica pertactin Disclosure; Fig 1b; 47pp; English. present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to Bordetella bronchiseptica pertactin (outer membrane protein) or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antigens in biological preparations or in purifying corresponding proteins, glycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antigens to identify antibodies to Bordetella in materials such as human or other animal tissue and human or other animal cells, as well as biological fluids, such as human or other animal cells, including human sera, and to determine the concentration of Ab in those materials. Thus the antigens can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. pertussis pertactin outer membrane protein, p.69.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

The invention relates to polypeptides derived from Bordetella pertussis pertactin (Prn1). The polypeptide is useful in the preparation of vaccines against B. pertussis, B. bronchiseptica and other infectious diseases of mammals including diphtheria, tetanus, polio and infections caused by Haemorphilus influenza b. The polypeptide is especially useful for eliciting an immune response against Bordetella sp. Antibodies against the polypeptide may be used for pharmaceutical and/or diagnostic purposes, particularly for treating or preventing infections caused by Bordetella pertussis or Bordetella parapertussis. The present sequence is B. pertussis prn1 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    B. bronchiseptica strain prn2 pertactin outer membrane protein region I.

Couter membrane protein or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antipens in biological preparations or in purifying corresponding proteins, glycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antigens to identify antibodies to Bordetella in materials such as human or other animal cells, as well as biological fluids, such as human or other animal cells, as well as biological fluids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the antigens can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. bronchiseptica
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pertactin; prn1; antibacterial; immunostimulant; antimicrobial; vaccine; diphtheria; tetanus; polio; Haemophilus influenza b infection; therapy; immune response; antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New polypeptides derived from Bordetella pertussis pertactin, useful as a vaccine against infections caused by Bordetella strains, and other infectious diseases of mammals, e.g. diphtheria, tetanus, or polio
                                                                                                                                           Polypeptides containing polymorphisms of the repeated regions of pertactin in Bordetella species, useful in immunogenic compositions for treating infections caused by Bordetella and in diagnostic methods
                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to Bordetella bronchiseptica pertactin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 QRATIRRGDAPAGGGVPGGAVPGGFDPGGFGPGGFGPVLDGWYGVDVSGSTVELAQ.56

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to Bordetella bronchiseptica pertactin (outer membrane protein) or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antigens in biological preparations or in purifying corresponding proteins, glycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antigens to identify antibodies to Bordetella in materials such as human or other animal tissue and human or other animal cells, as well as biological fluids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the antigens can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. bronchiseptica pertactin outer membrane protein region I.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     B. bronchiseptica strain prn4 pertactin outer membrane protein region I.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Polypeptides containing polymorphisms of the repeated regions of pertactin in Bordetella species, useful in immunogenic. compositions for treating infections caused by Bordetella and in diagnostic methods

The invention relates to polypeptides derived from Bordetella pertussis pertactin (Prn1). The polypeptide is useful in the preparation of vaccines against B. pertussis, B. parapertussis, B. bronchiseptica and other infectious diseases of mammals including diphtheria, tetanus, polito and infections caused by Haemophilus influenza b. The polypeptide is especially useful for eliciting an immune responses against Bordetella sp. Antibodies against the polypeptide may be used for pharmaceutical and/or diagnostic purposes, particularly for treating or preventing infections caused by Bordetella pertussis or Bordetella parapertussis. The present used for epitope mapping and vaccination.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to polypeptides derived from Bordetella pertussis pertactin (Prn1). The polypeptide is useful in the preparation of vacines against B. pertussis, B. parapertussis, B. bronchiseptica and other infectious diseases of mammals including diphtheria, tetanus, polic and infections caused by Haemophilus influenza b. The polypeptide is especially useful for eliciting an immune response against bordetella sp. Antibodies against the polypeptide may be used for pharmaceutical and/or diagnostic purposes, particularly for treating or preventing infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pertactin; prn1; antibacterial; immunostimulant; antimicrobial; vaccine; diphtheria; tetanus; polio; Haemophilus influenza b infection; therapy; immune response; antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polypeptides derived from Bordetella pertussis pertactin, useful as a vaccine against infections caused by Bordetella strains, and other infectious diseases of mammals, e.g. diphtheria, tetanus, or polio

The polypeptide is useful in the preparation of vaccines against B pertussis, B. parapertussis, B. bronchiseptica and other infectious diseases of mammals including diphtheria, tetanus, polic and infections caused by Haemophilus influenza b. The polypeptide is especially useful for eliciting an immune response against Bordetella sp. Antibodies against the polypeptide may be used for pharmaceutical and/or diagnostic purposes, particularly for treating or preventing infections sequence is a monoclonal antibody specific to region 1 of pertactin used for epitope mapping and vaccination.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to polypeptides derived from Bordetella pertussis pertactin (Prn1). The polypeptide is useful in the preparation of vaccines against B. pertussis, B. parapertussis, B. bronchiseptica and other infectious diseases of mammal including diphtheria, tetanus, polico and infections caused by Haemophilus influenza b. The polypeptide is especially useful for eliciting an immune response against Bordetella sp. Antibodies against the polypeptide may be used for pharmaceutical and/or diagnostic purposes, particularly for treating or preventing infections caused by Bordetella pertussis or Bordetella parapertussis. The present sequence is a monoclonal antibody specific to region 1 of pertactin used for epitope mapping and vaccination.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polypeptides derived from Bordetella pertussis pertactin, useful as a vaccine against infections caused by Bordetella strains, and other infectious diseases of mammals, e.g. diphtheria, tetanus, or polio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pertactin; prn1; antibacterial; immunostimulant; antimicrobial; vaccine
diphtheria; tetanus; polio; Haemophilus influenza b infection; therapy;
immune response; antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PeM68 monoclonal antibody specific for region 1 of pertactin.

The invention relates to polypeptides derived from Bordetella pertussis pertactin (Prn1). The polypeptide is useful in the preparation of vaccines against B. pertussis, B. parapertussis, B. bronchiseptica and other infectious diseases of mammals including diphtheria, tetanus, polio and infections caused by Haemophilus influenza b. The polypeptide is especially useful for eliciting an immune response against Bordetella sp. Antibodies against the polypeptide may be used for pharmaceutical and/or diagnostic purposes, particularly for treating or preventing infections sequence is a monoclonal antibody specific to region I of pertactin used for epitope mapping and vaccination.

The invention relates to polypeptides derived from Bordetella pertussis pertactin (Prol). The polypeptide is useful in the preparation of vaccines against B. pertussis, B. parapertussis, B. bronchiseptica and other infectious diseases of mammals including diphtheria, tetanus, pollo and infections caused by Haemophilus influenza b. The polypeptide is especially useful for eliciting an immune response against Bordetella sp. Antibodies against the polypeptide may be used for pharmaceutical and/or diagnostic purposes, particularly for treating or preventing infections sequence is a monoclonal antibody specific to region 1 of pertactin used for epitope mapping and vaccination.
                                                                                                                                                                             New polypeptides derived from Bordetella pertussis pertactin, useful as a vaccine against infections caused by Bordetella strains, and other infectious diseases of mammals, e.g. diphtheria, tetanus, or polio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Polypeptides containing polymorphisms of the repeated regions of pertactin in Bordetella species, useful in immunogenic compositions for treating infections caused by Bordetella and in diagnostic methods
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     B. bronchiseptica strain I-1 pertactin outer membrane protein region I.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to polypeptides derived from Bordetella pertussis pertactin (Prn1). The polypeptide is useful in the preparation of vaccines against B. pertussis, B. parapertussis, B. bonochiseptica and other infectious diseases of amammals including diphtheria, tetanus, polico and infections caused by Haemophilus influenza b. The polypeptide is especially useful for eliciting an immune response against Bordetella sp. Antibodies against the polypeptide may be used for pharmaceutical and diagnostic purposes, particularly for treating or preventing infections caused by Bordetella pertussis or Bordetella parapertussis. The present sequence is a monoclonal antibody specific to region I of pertactin used for epitope mapping and vaccination.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pertactin; prn1; antibacterial; immunostimulant; antimicrobial; vaccine; diphtheria; tetanus; polio; Haemophilus influenza b infection; therapy; immune response; antibody.
                                                                                                                                                                                                                                                                                                                                                                                 New polypeptides derived from Bordetella pertussis pertactin, useful a vaccine against infections caused by Bordetella strains, and other infectious diseases of mammals, e.g. diphtheria, tetanus, or polio

The present invention relates to Bordetella bronchiseptica pertactin (outer membrane protein) or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antigens in biological preparations or in purifying corresponding proteins, glycoproteins or their mixtures when sed in affinity chromatographic columns. Pertactin is useful as antigens to identify antibodies to Bordetella in materials such as human or other animal tissue and human or other animal cells, as well as biological fluids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the antigens can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. bronchiseptica pertactin outer membrane protein region I.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                    Patent No. 5994099
GENERAL INFORMATION:
APPLICANT: Lewis, Randolph V
APPLICANT: Lewis, Randolph V
APPLICANT: Hayashi, Cheryl Y
TITLE OF INVENTION: EXTREMELY ELASTIC SPIDER SILK PROTEIN AND DNA
TITLE OF INVENTION: CODING THEREFOR
NUMBER OF SEQUENCES: 29
CORRESPONDENCE ADDRESS: ADDRESS: ADDRESSE: BIRCH, STEWART, KOLASCH & BIRCH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     APPLICANT: Lewis, Randolph V
